

## The Water Cycle Building Instructions

### Materials

- three two-liter bottles with caps
- a drill with a large (1/4" or so) drill bit
- pliers
- drywall screw or old style compass
- two 30 cm strips of cotton shirt, sock, or rag

### Before you begin:

Have an adult drill a 1/4" hole in one of the three bottle caps.

**1.** Remove labels from bottles.

**2.** Cut Bottle A just below the upper curve.

**3.** Cut Bottle B just above the curved bottom.

**4.** Place the predrilled cap on Bottle B. Insert a 30 cm looped strip of rag, sock, or old shirt, so about 10 cm hangs down from the cap.

**5.** Tie a 30 cm looped strip of rag, sock, or old shirt around the neck of Bottle C so one end hangs down about 5 cm.

**6.** Assemble.
